SUMMARY

Backend Software Engineer with 6 months of experience building scalable full-stack applications and REST APIs. Proven expertise in **Python, React FastAPI, Docker, SQL**, and **CI/CD**, with a strong foundation in **Data Structures & Algorithms, Object-Oriented Programming**, and **System Design**.

EDUCATION

- St. Thomas College of Engineering and Technology** Mattanur, Kerala, India
Bachelor of Technology in Computer Science & Engineering CGPA: 8.07/10.00 September 2022 – April 2026

EXPERIENCE

- Kannur Vision** Kannur, Kerala
Software Engineer April 2026 – August 2026
 - Cut manual operational effort by **80%** by architecting a full-stack Distribution Management System.
 - Eliminated device loss from untracked inventory by building real-time distribution and returns tracking with full audit logging.
 - Enabled secure, audit-ready workflows across **8 hierarchical roles** by designing an RBAC system with a 55+ entry permission matrix.
 - Streamlined inventory, defect, and returns tracking across **7 entity domains** by building 21 database tables with an idempotent migration system.
 - Improved system observability by deploying Prometheus and Grafana dashboards tracking **40+ custom business and technical metrics**.
 - **Tech Stack:** React.js, FastAPI, Python, MySQL, Docker, JWT, RBAC, Prometheus, Grafana, Nginx, Linux
- Kerala Vision Broadband Limited** Kannur, Kerala
DevOps Intern May 2025 – June 2025
 - Developed an internal network backup management platform to automate device log backups, backup scheduling, config management, and log comparison, significantly **reducing manual network administration efforts by 80%**.
 - Designed a secure backup workflow using **SSH jump-host architecture, RBAC, and JWT authentication**, enabling controlled access to network devices while automating log archival to Google Drive using **rclone**.
 - Built Python automation using **Netmiko** for remote device backups, integrated WhatsApp notifications for backup success and failure alerts, and deployed the application using Docker on Linux servers.
 - **Tech Stack:** React.js, FastAPI, Python, MongoDB, Docker, Netmiko, Rclone, SSH, JWT, RBAC, REST APIs, Linux

SKILLS

- **Languages:** Python, JavaScript, Java, C/C++, SQL, GO, HTML, CSS
- **Frameworks & Libraries:** FastAPI, React, Flask, Node.js, Express.js, REST APIs, JWT, OAuth2, RBAC, Microservices
- **Cloud & DevOps:** AWS, Docker, Docker Compose, Nginx, GitHub Actions(CI/CD), Linux, Prometheus, Grafana,
- **CS Fundamentals:** Data Structures & Algorithms, System Design, OOP, SDLC
- **Testing & Tools:** Git, GitHub, Postman, pytest, Unit Testing, Integration Testing, Code Review

PROJECTS

- TRACIENT – Blockchain-Based Income Traceability System** 
Hyperledger Fabric, Go, Node.js, React.js, Python, MongoDB, Random Forest, XGBoost, JWT, REST APIs
 - Designed and developed a blockchain-based platform to improve welfare eligibility verification by replacing survey-based income assessment with immutable wage records, enabling transparent income traceability for formal and informal workers.
 - Built a permissioned **Hyperledger Fabric** network with Go smart contracts, secure role-based workflows, and REST APIs to record and verify wage transactions across employers, workers, and government authorities.
 - Engineered AI services using **Random Forest** and **XGBoost** to classify BPL/APL households and detect anomalous income patterns across **30,000+ worker profiles**, improving fraud detection and eligibility assessment.

ContextOS - Privacy-First AI Memory Engine

FastAPI, LangChain, ChromaDB, Kuzu, Ollama, React, Docker

- Architected a **privacy-first AI memory engine** with a hybrid **Graph + Vector RAG** pipeline, combining Kuzu knowledge graphs and ChromaDB semantic search to deliver context-aware responses using locally hosted LLMs with **zero cloud dependency**.
- Built a production-ready platform featuring encrypted document ingestion, FastAPI REST APIs, React dashboard, Docker deployment, and **60+ automated tests**, enabling secure enterprise knowledge management entirely on-device.

LEADERSHIP & ACHIEVEMENTS

- **Technical Lead – VBlaze STM** : Led a team of 20+ student developers in building websites for college events, organized technical workshops, and was recognized for delivering high-quality event platforms.
- **Best Paper Award – RAET 2026**: Received the Best Paper Award for **TRACIENT**, a blockchain-based income traceability system presented at the RAET 2026 National conference.
- **Data Structures & Algorithms**: Solved 240+ LeetCode problems .
